

Cryptpay

Release Notes for April, 2020

Payment Batch 150 Byte Reliability

Cryptpay enhanced the payment batch 150 byte process to pass a card token to TSYS in the event a credit card number is not available due to either an invalid token being received or the received token has a status set to not process transactions. Prior to this change, the payment batch process would stop until the token was either corrected or the payment request was removed from the file.

Client Action

Clients will not be impacted by this enhancement. No action is required at this time, as all transactions submitted through existing certified solutions will process successfully.

Review the information in this communication to determine potential impacts to your business processes, policies, and systems to support this enhancement.

The Cryptpay User Acceptance Test (UAT) environment is available for clients to test new functionality and for regression testing.

If you have questions or encounter issues during testing, contact PaymentSpring Client Services at ClientServices@PaymentSpring.com or 1.866.431.4637.
